Executive Summary

Morobe Province is characterised by a highly diverse malaria transmission ecology driven by its wide geographic range, spanning coastal lowlands, dense river valleys, inland foothills, and mountainous highland fringe areas. This ecological diversity results in marked variation in malaria transmission intensity across districts, with stable year-round transmission in lowland and coastal zones, and more unstable, seasonal, and outbreak-prone transmission in inland and higher altitude locations. The province is consistently recognised as one of Papua New Guinea's major malaria burden provinces and is regularly classified among national malaria "hotspot provinces" requiring priority intervention under national control strategies.

Morobe is also the most populous province in Papua New Guinea, with an estimated population approaching one million people. The population is heavily concentrated in Lae and surrounding districts, while substantial rural populations remain dispersed across difficult terrain and hard-to-reach communities. This population distribution contributes to sustained malaria transmission pressure, driven by high human mobility between urban, peri-urban, and rural settings, combined with environmental conditions that remain highly favourable for vector breeding.

Malaria transmission in Morobe is driven primarily by *Plasmodium falciparum* and *Plasmodium vivax*. National surveillance data indicate that Morobe continues to contribute significantly to the national malaria burden, with Papua New Guinea accounting for one of the highest malaria incidence rates in the Western Pacific region. Within the province, *P. falciparum* is more prevalent in lowland coastal and urban areas such as Lae, while *P. vivax* persists more strongly in inland and higher elevation districts such as Kabwum and Menyamya, where transmission is less intense but more stable over time due to lower population immunity and intermittent environmental suitability.

National malaria control policy classifies Morobe as a priority "high burden transmission province", alongside other coastal and lowland provinces such as Madang, East Sepik, and Gulf. These provinces are recognised as key reservoirs of malaria transmission capable of sustaining epidemic spill-over into highland provinces during favourable climatic conditions. As a result, Morobe remains central to national malaria elimination and control efforts, particularly through large-scale LLIN distribution, strengthened case management, surveillance, and vector control interventions.

Recent health system reporting and surveillance data indicate that Morobe continues to experience substantial malaria incidence, with clear spatial variation across ecological zones. Health facility data show that districts such as Lae, Huon Gulf, and Finschhafen consistently report higher malaria case loads due to dense population settlements, year-round transmission conditions, and environmental factors supporting vector proliferation. In contrast, inland districts such as Menyamya and Kabwum report lower but persistent malaria incidence, often compounded by limited access to diagnostic services, treatment delays, and reduced health facility coverage. Overall, provincial malaria incidence remains above national targets, reflecting sustained transmission across multiple ecological strata.

In addition to malaria, Morobe's health system faces concurrent infectious disease pressures, including tuberculosis, respiratory infections, and periodic vaccine-preventable disease outbreaks. These overlapping disease burdens place additional strain on health infrastructure, particularly in rural and remote districts where health facility density is low and outreach services are essential to maintaining service coverage. This multi-disease

environment further complicates malaria control efforts and reinforces the need for integrated primary health care delivery.

The 2024 Long-Lasting Insecticidal Net (LLIN) family-level census and distribution exercise was implemented across Morobe Province under the coordination of National Department of Health (NDOH) the National Malaria Control Program (NMCP) in collaboration with the Morobe Provincial Health Authority (MPHA). The activity forms part of the national three-year rolling LLIN distribution strategy, designed to sustain universal coverage while adapting to evolving population dynamics, ecological risk profiles, and operational constraints.

The family-level census and LLIN distribution was conducted across Bulolo, Finschhafen, Huon Gulf, Kabwum, Lae, Menyamya, and Nawaeb Districts between 10 July and 11 December 2024. The remaining districts, Markham and Tewae-Siassi, were covered in the December 2023 distribution cycle, in accordance with the national phased implementation schedule. These two districts will be again covered during 2026 LLIN distribution cycle. The programme is implemented under the Rotarians Against Malaria (RAM) operational framework, aligned with the National Department of Health (NDOH) three-year universal coverage cycle, ensuring that every household is reached at least once within the distribution cycle.

Figure 1 LLIN distributions at Milford Have HC

In total, 425,974 LLINs were distributed to an estimated population of 868,227 people, resulting in an average coverage of approximately 49 nets per 100 population (0.49 nets per person) across Morobe Province. This level of coverage is consistent with NMCP universal coverage benchmarks, particularly in settings where household composition, sleeping arrangements, and population mobility require flexible needs-based allocation rather than strict one-to-one distribution ratios.

The distribution covered the full ecological and demographic spectrum of Morobe Province, from densely populated urban and peri-urban settlements in Lae to sparsely populated inland and mountainous communities in Kabwum and Menyamya. This broad coverage reflects the highly heterogeneous nature of malaria transmission in the province, where risk is strongly

influenced by altitude, settlement density, environmental conditions, and access to health services.

Urban districts such as Lae and Nawaeb remain of critical importance due to rapid urbanisation, informal settlement expansion, and high population mobility, all of which contribute to sustained malaria transmission despite relatively improved infrastructure. Coastal districts including Finschhafen and Huon Gulf represent stable transmission zones, where climatic conditions such as high rainfall, humidity, and stagnant water bodies support continuous vector breeding cycles throughout the year. Inland districts such as Menyama and Kabwum, although less densely populated, continue to experience persistent transmission pockets, particularly in valley settlements where access to health services is limited and early case detection remains challenging.

The programme prioritised equitable distribution based on verified household enumeration, population size, and malaria risk stratification in line with NMCP guidance. High-altitude settlements with minimal or negligible malaria transmission risk were deprioritised to optimise resource allocation and ensure that LLINs were concentrated in lower-altitude, higher-burden zones where public health impact is greatest.

Table one shows, overall, during implementation, 425,974 LLINs were successfully distributed, achieving consistent coverage across all targeted districts and maintaining provincial distribution efficiency at approximately 49 nets per 100 population. This reflects strong alignment between population targeting, field implementation, and national malaria control policy objectives.

TABLE ONE – Population And Nets Distributed

District	Population In 2021	Total Estimated Population 2024	Population Surveyed 2024	House Holds Surveyed 2024	Nets Issued 2024	Nets Distributed Per 100 People
Bulolo	1,50,529	1,63,531	1,68,010	31,766	82,078	48
Finshafen	64,608	70,188	68,252	12,959	33,008	49
Huon	1,28,025	1,39,083	1,41,419	27,397	69,047	51
Kabwum	49,886	54,195	50,086	10,202	25,330	48
Lae	2,69,766	2,93,067	2,61,080	41,805	1,26,449	51
Menyama	1,01,248	1,09,993	1,03,474	20,956	52,319	50
Nawaeb	66,626	72,381	75,906	14,432	37,743	49
Totals	8,30,688	9,02,438	8,68,227	1,59,517	4,25,974	49.0

A further 670 LLINs were donated to health centres as nets were surplus to requirement, were no longer in bales and in most cases could not be easily returned to a central location. These nets would be distributed to pregnant mothers and for use over hospital beds where needed.

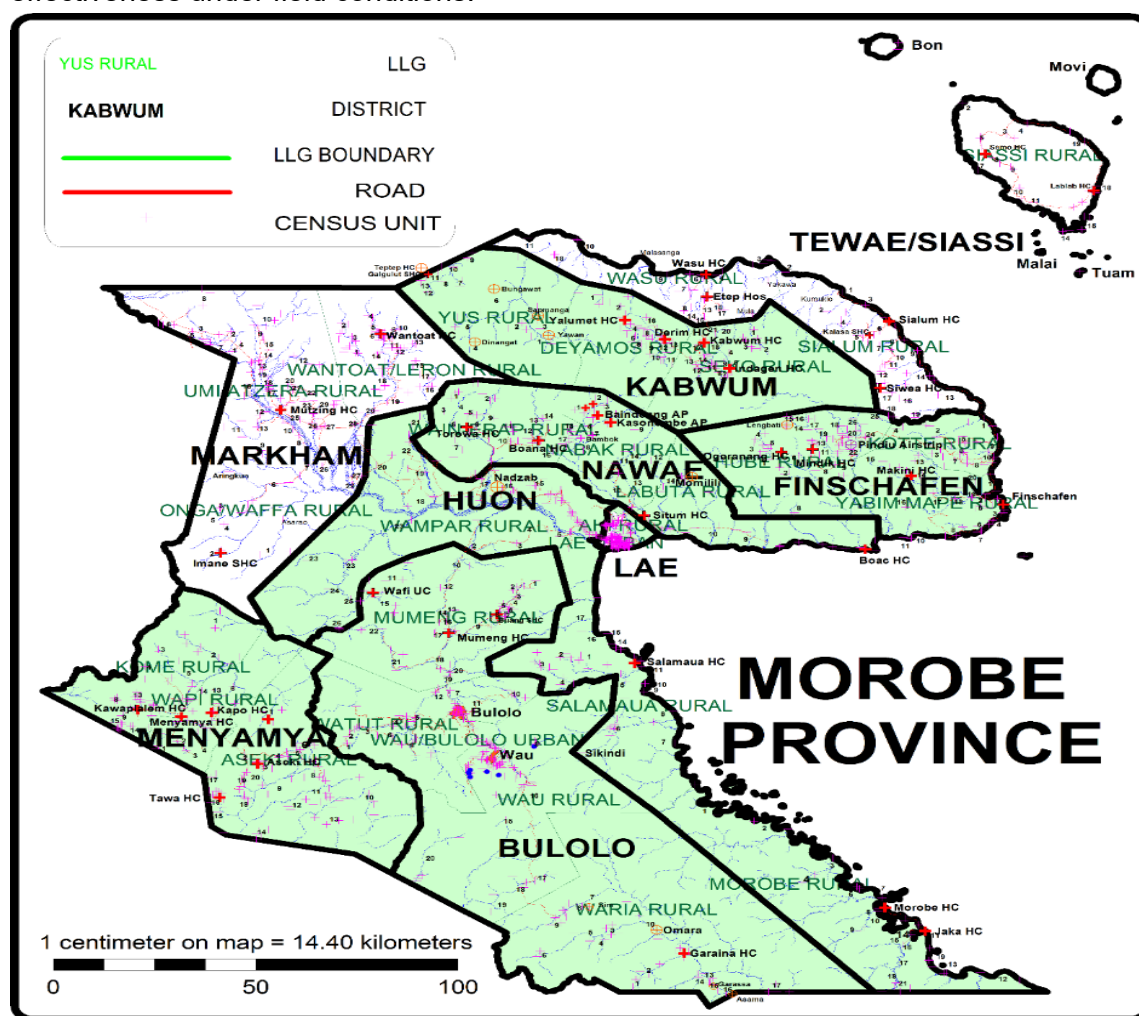

The overall operational cost of the programme was PGK 1,442,228.52 (approximately US\$ 369,143), resulting in a cost of about PGK 3.38 per net delivered. This represents a slight increase of just over 3% above the approved budget. The increase was mainly driven by higher-than-expected costs for fuel, vehicle hire, and security support, including payments made to police and defence personnel engaged to support operations in high-risk and urban areas.

Overall, the LLIN distribution in Morobe Province was successfully implemented under the technical guidance of the National Malaria Control Program (NMCP) and in close partnership with the Morobe Provincial Health Authority (MPHA) and District Health Managers. This

strong coordination across national, provincial, and district levels ensured that all targeted communities were effectively reached and that households received nets in accordance with the planned distribution strategy.

Feedback from partners and communities was generally positive, with the methodology perceived as transparent, systematic, and well-coordinated. However, as observed in previous distribution rounds, a small number of households expressed concerns regarding the number of nets received. These concerns were largely attributed to a limited understanding of the needs-based allocation system rather than gaps in implementation.

All LLINs distributed in Morobe Province were supplied and funded by the Global Fund, including associated distribution costs. The nets used in this campaign were MagNet LLINs, representing a newer generation of insecticidal nets compared to those used in previous rounds. These nets are expected to provide improved durability and sustained insecticidal effectiveness under field conditions.

MAP 1- Morobe Provincial Map showing 2024 LLIN distribution districts

Background

Rotarians Against Malaria (RAM) is a nationally based organization established in 1997 by the Port Moresby Rotary Club in response to the significant public health burden posed by malaria in Papua New Guinea (PNG). Since its inception, RAM has played a central role in supporting malaria control efforts across the country, with a particular focus on the large-scale distribution of Long-Lasting Insecticidal Nets (LLINs). RAM operates under a clear

mandate to support malaria prevention and control through LLIN distribution and works in close coordination with the National Department of Health (NDOH), particularly the National Malaria Control Program (NMCP), as well as Provincial Health Authorities (PHAs). In the context of Morobe Province, all LLIN activities are implemented in close partnership & collaboration with the Morobe Provincial Health Authority (MPHA), ensuring alignment with provincial health priorities and national malaria control strategies. RAM also collaborates with a wide range of stakeholders, including multilateral and bilateral partners such as UNICEF and the World Health Organization (WHO), as well as non-governmental organizations (NGOs) and church-based health service providers. These partnerships are critical for ensuring coordinated, efficient, and high-quality implementation of malaria interventions across diverse and often hard-to-reach communities.

Since 2010, RAM has coordinated nationwide LLIN distribution through a structured rolling three-year cycle, implemented in partnership with NDOH, NMCP, and PHAs. Under this approach, each province—including Morobe Province—is systematically covered, ensuring that, in principle, every village is reached once every three years. In Morobe, this includes districts such as Bulolo, Finschhafen, Huon Gulf, Kabwum, Lae, Menyamya, and Nawaeb, which are prioritised based on malaria transmission intensity, population density, and operational feasibility. The remaining two districts Markham and Tewae Siassi will be covered during 2026 distributions. This cyclical strategy is essential for maintaining universal coverage, replacing worn-out nets, and sustaining effective vector control over time. It also supports improved logistical planning, efficient resource allocation, and continuous engagement with communities across both urban and remote settings.

The financing of LLIN procurement and distribution in PNG has evolved significantly over time. Since 2009, the Global Fund has been the primary funding partner, supporting both the procurement of LLINs and the operational costs associated with distribution, including logistics, transportation, storage, supervision, and monitoring. These activities are implemented in close coordination with NMCP and PHAs to ensure adherence to national technical guidelines and effective programme delivery across Morobe Province.

In 2017, the Against Malaria Foundation (AMF) became a key partner, contributing substantially to LLIN supply nationwide. From 2018 onwards, AMF support was strategically targeted to areas below 1,600 metres, where malaria transmission is most intense. During the same period (2017–2020), Global Fund resources were primarily used to support operational and administrative costs, complementing AMF's commodity support.

In 2020, additional LLINs were provided through a donation from the Government of China, which were allocated to populations living between 1,600 and 2,000 metres—transitional zones with intermittent malaria risk. While Morobe Province is predominantly lowland and coastal, these higher-altitude allocations were relevant for inland and highland fringe districts such as Kabwum and Menyamya, where pockets of transmission persist under favourable conditions.

It is important to note that since 2015, the NMCP has discontinued routine LLIN distribution in areas above 2,000 metres, as these environments are generally considered unsuitable for sustained malaria transmission due to lower temperatures. In Morobe Province, this policy has limited impact compared to highland provinces; however, altitude-based stratification remains relevant in guiding targeted interventions in inland and mountainous areas.

The funding landscape shifted in 2021 when AMF ceased its support to PNG. As a result, the Global Fund resumed full responsibility for both LLIN procurement and distribution financing. While this has ensured continuity of the programme, it has also introduced operational and

financial constraints, particularly in maintaining coverage in transitional altitude zones (1,600–2,000 metres) and in hard-to-reach rural communities.

Consequently, in recent implementation cycles—including the 2024 campaign in Morobe Province—LLIN distribution has been prioritised for high-burden, high-transmission areas, particularly in coastal, lowland, and densely populated districts such as Lae, Huon Gulf, Finschhafen, and Nawaeb, while also maintaining coverage in inland districts including Bulolo, Menyamya, and Kabwum. This approach ensures that resources are directed to populations at greatest risk while maintaining broad provincial coverage.

Overall, the success of LLIN distribution in Morobe Province has been underpinned by strong coordination between RAM, NMCP, and the Morobe Provincial Health Authority, as well as sustained support from development partners. Continued collaboration, risk-based prioritisation, and reliable funding will remain critical to maintaining effective vector control coverage and reducing malaria transmission across the province.

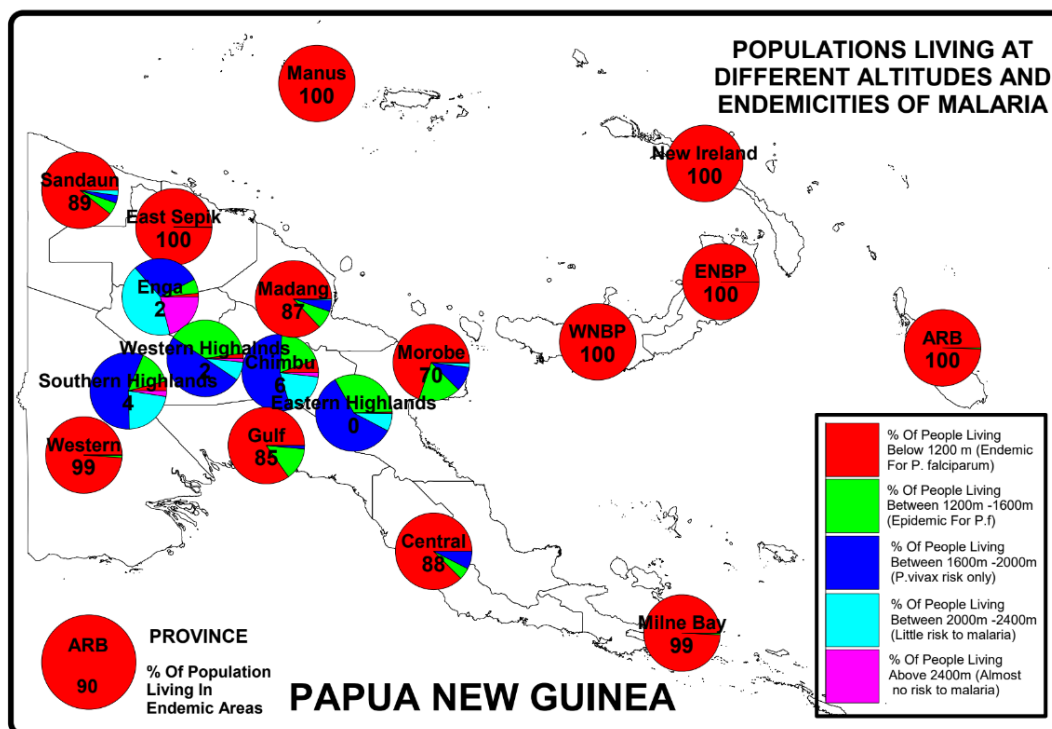

LLIN distribution in Morobe Province, as in the rest of PNG, is primarily conducted at the household level to ensure equitable access and effective utilisation. However, in the context of funding and logistical constraints, distribution strategies are adapted using a risk-based stratification approach, prioritising high-transmission and high-population areas to maximise public health impact.

Morobe Province is a coastal province on the north coast of mainland of Papua New Guinea (PNG). 70% of the population live in areas of permanent malaria transmission below 1200m, though about 50% of these people live along the coastal area in altitudes below 400m. A further 18% live in areas that people consider epidemic in nature (1200-1600m) with 10% living in areas where only *P. vivax* is thought to exist (1600-2000m) and the remaining 2% living about 2000m where malaria is considered absent.

Figure 2 LLIN storage containers in Lae

Epidemiological Stratification of Papua New Guinea

Map 2 Epidemiological stratification of PNG

Papua New Guinea (PNG) is broadly classified into five epidemiological zones based on altitude, malaria transmission dynamics, and access to health services. This stratification framework is fundamental for guiding the prioritisation, targeting, and implementation of Long-Lasting Insecticidal Net (LLIN) distribution nationwide. It ensures that limited resources are directed to populations at highest risk while maintaining appropriate coverage in vulnerable and transitional areas.

a) Areas above 2,000 metres

Regions located above 2,000 metres in altitude are generally excluded from routine LLIN distribution programmes. At these elevations, environmental conditions—particularly consistently low temperatures—are not conducive to the survival of malaria vectors. As a result, malaria transmission is considered highly unlikely, and these areas are classified as non-priority zones for LLIN distribution, except in the event of confirmed outbreaks.

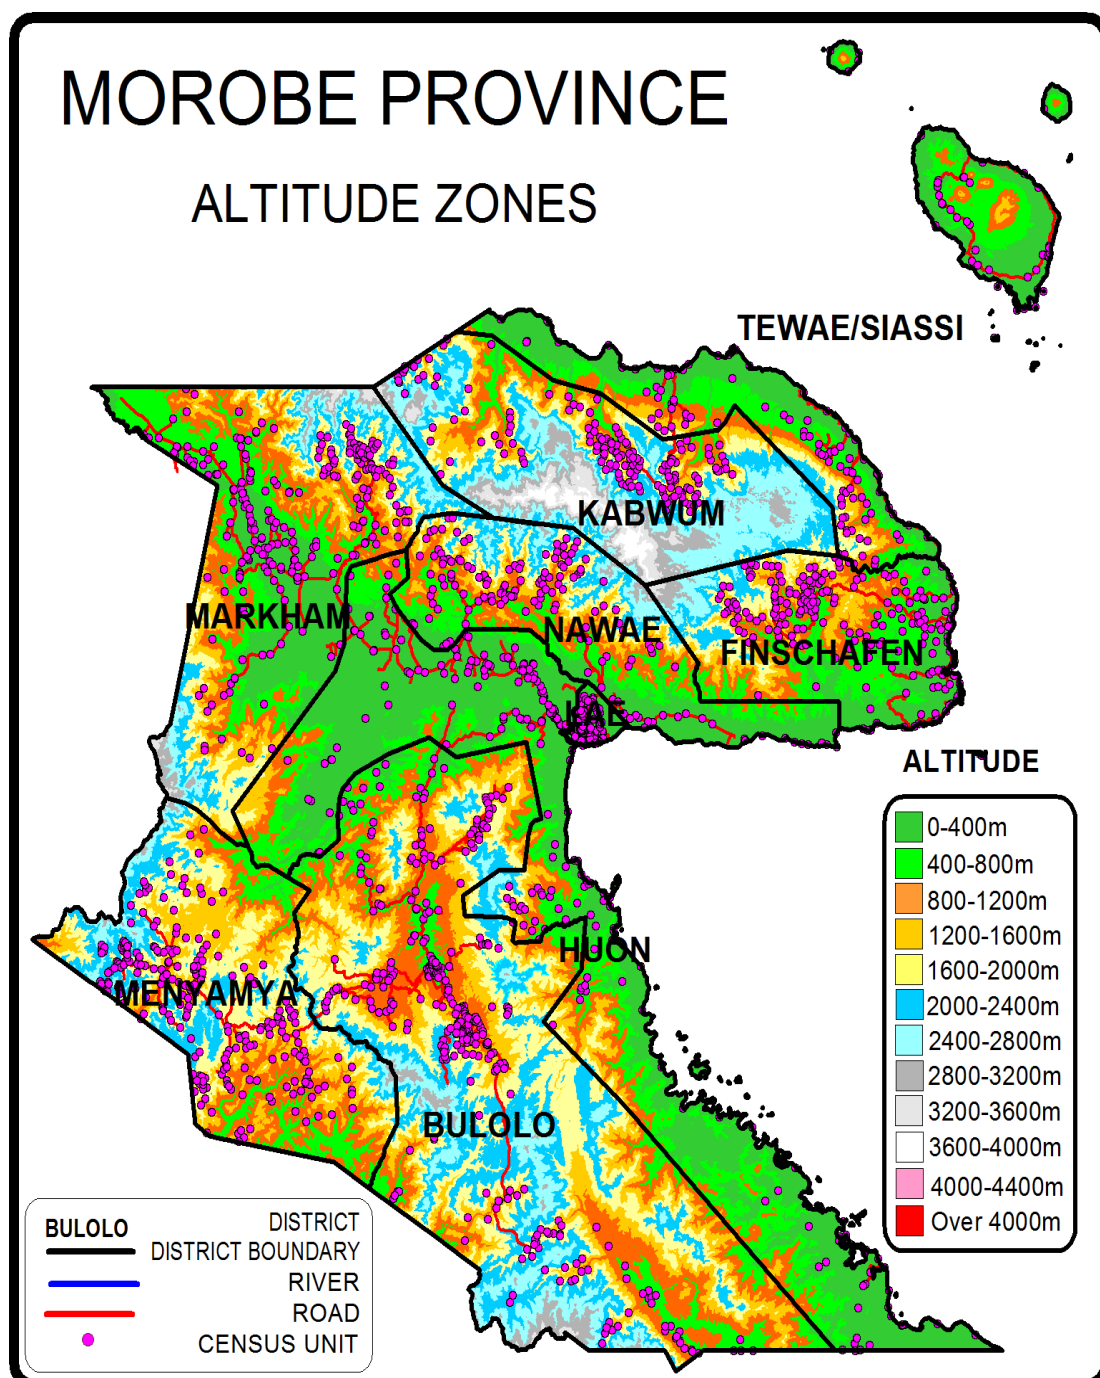

In the context of Morobe Province, only limited high-altitude fringe areas approach this elevation threshold, and therefore this classification has minimal operational impact compared to highland provinces.

b) Lowland areas (0–1,200 metres)

Lowland areas up to 1,200 metres experience stable and often intense malaria transmission. These settings typically face additional challenges, including high population density, environmental conditions favourable for mosquito breeding (such as high rainfall and humidity), and in some cases limited access to health services.

These areas represent the highest priority for malaria control interventions. Routine household-level LLIN distribution is consistently implemented to maintain high coverage and reduce malaria burden.

In Morobe Province, the majority of districts—including Lae, Nawaeb, Huon Gulf, and Finschhafen—fall within this ecological zone. These districts account for a large proportion of the provincial population and malaria case load, making them central to LLIN distribution planning and implementation.

Map 3 Classification of districts by altitude

Intermediate zones (1,200–1,600 metres)

Areas between 1,200 and 1,600 metres are characterised by low but variable malaria transmission. While not consistently endemic, these zones are prone to periodic outbreaks due to low population immunity and environmental variability, including fluctuations in temperature and rainfall.

LLIN distribution is maintained in these areas as a preventive strategy to reduce the risk of resurgence and protect vulnerable populations.

In Morobe Province, parts of Bulolo and inland areas of Huon Gulf and Nawaeb fall within this transitional altitude range, where malaria transmission may occur intermittently and requires continued surveillance and targeted intervention.

d) Highland transitional zones (1,600–2,000 metres)

Areas between 1,600 and 2,000 metres are considered transitional zones with generally low malaria endemicity. Transmission in these areas is typically sporadic and often linked to climatic variations or population movement from lower-risk zones.

During periods of funding constraint, these areas may be partially or fully excluded from routine LLIN distribution. Historically, targeted approaches—such as prioritising vulnerable groups (e.g., children under five)—have been used in these zones.

Support for LLIN distribution in these zones has varied over time. For example, in 2020, LLINs were supplied through a donation from the Government of China, complemented by Global Fund support. While broader coverage was achieved in 2021, the sustainability of distribution in these areas remains uncertain due to funding limitations.

e) Urban and peri-urban areas

Urban and peri-urban areas are typically located in lowland zones but benefit from relatively improved access to healthcare services, infrastructure, and commercial supply chains. During periods of limited funding, these areas may be deprioritised for mass LLIN distribution campaigns, based on the assumption that households can access nets through private markets or routine health services.

However, in practice, urban settings in PNG—including Lae City—continue to experience significant malaria transmission due to rapid urbanisation, expansion of informal settlements, overcrowding, and poor environmental sanitation. These factors sustain mosquito breeding and increase human-vector contact.

As a result, urban and peri-urban areas in Morobe Province remain an important focus for LLIN distribution, particularly in high-density and underserved communities. Previous strategies, such as targeted campaigns focusing on vulnerable groups, have been implemented during funding constraints; however, full household coverage remains the preferred approach where resources allow.

Overall, this stratification approach enables malaria control programmes to tailor LLIN distribution strategies according to epidemiological risk, ensuring that high-transmission and high-burden areas—such as the lowland and coastal districts of Morobe Province—receive priority attention while maintaining flexibility to respond to changing transmission patterns.

Coordination and guidance from NMCP and Morobe PHA

Figure 3 Dr. Jacob Kisomb, NMCP during LLIN distributions in Morobe PHA

The LLIN programme in Morobe Province is fully funded by The Global Fund and implemented through a structured and closely coordinated partnership between National Department of Health (NDOH) the National Malaria Control Program (NMCP), the Morobe Provincial Health Authority (MPHA), District Health Services, and Rotarians Against Malaria (RAM). This arrangement provides the operational backbone for planning, coordination, implementation, and monitoring across all phases of the distribution cycle.

Figure 4 LLIN Provincial Planning meeting with CEO, Morobe PHA on 11th Sep 2024

At the provincial level, the programme is anchored through formal planning and oversight mechanisms led by MPHA, with technical guidance from NMCP and operational support from RAM. This ensures that LLIN implementation remains fully aligned with national malaria

control policy while being responsive to the epidemiological and logistical realities of Morobe Province.

A key coordination platform is the Provincial LLIN Planning Meeting was held on 11th Sep 2024, convened by MPHA and attended by the Chief Executive Officer, Public Health Director, Provincial Disease Control Officer, Provincial Malaria Supervisor, and other relevant provincial health officials. These meetings are held well in advance of each distribution cycle and provide the main forum for joint planning between MPHA and RAM.

During these meetings, RAM presents detailed operational plans for Morobe Province, including:

- Previously verified population data
- Projected population growth for the current distribution cycle
- List of health facilities and target villages across all districts
- LLIN requirements by district and village
- Proposed survey and distribution timelines

The process is interactive, with MPHA providing important technical and contextual input. This includes updates on malaria transmission trends, outbreak situations, security considerations, transport accessibility (road, sea, and air), and guidance on secure storage of LLINs at district hospitals, health centres, and area medical stores. This ensures that implementation planning is based on current provincial conditions and aligned with health system capacity.

A key feature of this coordination is the joint identification of implementation support arrangements. MPHA and RAM work together to confirm the engagement of local volunteers, district health staff participation, and logistical support requirements for field activities. This includes arrangements for transport, community mobilisation, and field facilitation where required. This joint planning process strengthens transparency, accountability, and shared ownership between MPHA, RAM, and District Health Services.

Following the Provincial Planning Meeting, MPHA issues formal instructions to District Health Managers and Officers in Charge of Health Centres. These directives outline agreed implementation schedules, district responsibilities, and support requirements from health facilities. This ensures a clear flow of communication from provincial to district and facility levels, supporting coordinated preparedness across all implementation sites.

Once planning is completed, RAM works closely with MPHA to facilitate the movement of LLINs to designated provincial and district storage facilities. From these secure storage points, nets are distributed to health facilities under the supervision of MPHA and District Health Managers. This ensures proper stock control, accountability, and adherence to agreed logistics procedures.

At field level, RAM deploys officers who are assigned to specific Local Level Government (LLG) areas and health facility catchments. These officers work under the guidance and oversight of MPHA and in close coordination with District Health Services and facility-based health staff. Their activities are aligned with NMCP operational guidelines and provincial implementation procedures.

District Health Managers and health facility in-charges play an important coordination role at implementation level. They support RAM teams by mobilising health staff, facilitating community engagement, integrating LLIN activities into routine service delivery, and ensuring consistency with district health priorities and MPHA directives.

Within this framework, RAM officers function as technical facilitators supporting field implementation. They assist District Health Teams and local health staff and volunteers with household enumeration, distribution planning, community mobilisation, and adherence LLIN distribution procedures. This ensures standardised implementation across the province while allowing flexibility to accommodate the varied geographic and operational conditions of Morobe Province, including urban Lae, coastal districts such as Finschhafen and Huon Gulf, and remote inland districts such as Kabwum and Menyamya.

Figure 5 Dr. Kisomb, NMCP supervising LLIN distributions, Lae Urban

In addition, RAM officers support logistics coordination, field reporting, and real-time monitoring of distribution progress. Working closely with MPHA and district counterparts, they contribute to accountability in LLIN movement, verification of distribution coverage, and compliance with programme standards. They also assist in ongoing data validation and quality assurance throughout implementation.

A further important element of coordination is the weekly reporting system between RAM and MPHA. RAM provincial team leaders provide structured weekly updates to MPHA covering all districts and health facilities. These reports include progress on training, household surveys, distribution status, and operational issues. This allows MPHA to monitor implementation in real time and provide timely support where required.

Overall, the LLIN programme in Morobe Province is characterised by a strong and integrated partnership model. NMCP provides national technical direction, MPHA provides provincial leadership and oversight, District Health Services ensure operational coordination at local level, and RAM provides technical, logistical, and implementation support. This coordinated approach strengthens transparency, improves efficiency, and ensures alignment between national malaria control objectives and provincial health system priorities.

Schedule of LLIN Activities – Morobe Province

Referring to Table Two, the LLIN family-level census and distribution activities in Morobe Province were implemented in a phased manner from 10th July to 11th December 2024, covering all major districts through a operational approach based on geography and accessibility. Follow-up and mop-up activities continued into March 2025, during which an

additional 911 LLINs were distributed to areas that had been temporarily missed or delayed during the main implementation period. However, some final distributions were disrupted and partially halted due to localised tribal conflicts, which affected access and field team movement in a small number of locations.

Given the diverse geography of Morobe Province, implementation sequencing was carefully planned in consultation with the Morobe Provincial Health Authority (MPHA) and District Health Managers. Priority was given to operational efficiency, accessibility, and risk-based targeting. As such, implementation commenced in Lae District, where urban complexity, high population density, and informal settlement structures required early mobilisation and intensive coordination.

Following Lae, operations were extended to remote “fly-in/fly-out” districts including Bulolo, Kabwum, and Finschhafen, where access is largely dependent on air transport due to difficult terrain and limited road connectivity. In 2024, North Coast Aviation (NCA) was engaged to support access to these hard-to-reach areas, enabling timely deployment of field teams and movement of supplies. These districts required detailed operational planning for both the survey and distribution phases, including careful scheduling of flights, coordination with local health facilities, and staged deployment of teams. This ensured that all targeted communities were reached and that household-level coverage was completed despite geographical and logistical constraints.

Figure 6 Trekkers carrying nets for remote areas in Meneyama HC

Subsequently, distribution activities progressed to coastal and island-linked areas of Finschhafen and the Huon Gulf coastline, where sea transport was the primary mode of access. These operations were coordinated with local health facilities and community leaders to manage logistics across scattered and hard-to-reach coastal settlements.

The final phase of implementation focused on districts accessible by road, including Menyama, Bulolo, and Nawaeb, where operations were completed through land transport routes. These areas, while more accessible compared to inland or coastal-island locations, still required significant coordination due to road conditions and dispersed settlement patterns.

Table Two: General Timetable of Activities – Morobe Province

District	Target Population	Survey Start	Survey Finish	Distribution Start	Distribution Finish
Bulolo	182,522	10.07.24	21.10.24	16.07.24	30.10.24
Finschhafen	74,147	18.09.24	02.10.24	30.09.24	16.10.24
Huon Gulf	153,634	06.09.24	18.10.24	14.09.24	25.10.24
Kabwum	54,412	12.07.24	25.07.24	25.07.24	13.09.24
Lae	283,873	30.10.24	14.11.24	18.11.24	11.12.24
Menyamya	112,411	03.09.24	25.10.24	02.10.24	07.11.24
Nawaeb	82,462	28.08.24	15.09.24	01.09.24	15.11.24

In addition to the planned schedule, a total of 911 LLINs were distributed in early 2025 as follow-up coverage in areas where distribution activities were delayed or temporarily suspended due to security-related disruptions, including reported tribal conflicts in November 2024.

Furthermore, the remaining districts of Markham and Tewae–Siassi were not included in the 2024 implementation cycle and are scheduled to be covered under the 2026 LLIN distribution round, in line with the national three-year rolling distribution strategy and guidance from the NMCP and MPHA.

Methodology – Micro Planning and Survey

Figure 7 LLIN household volunteers survey training, Igam Barracks, Lae

Prior to implementation, a comprehensive master village list covering all settlements across Morobe Province was developed using baseline data from the 2000 National Census, updated RAM LLIN survey datasets (2021–2023 cycles), and validation inputs from the Morobe Provincial Health Authority (MPHA). This process was undertaken in close coordination with MPHA and aligned with National Malaria Control Program (NMCP) stratification and operational guidelines.

Population estimates for 2024 were generated for each village using a dual-method approach. The first utilised 2000 Census baseline projections adjusted for annual provincial growth trends. The second applied updated RAM 2021–2023 LLIN survey datasets with village-level growth adjustments. This combined methodology, validated through health staff's consultation, provided a robust planning framework for estimating LLIN requirements across Morobe Province, accounting for both urban growth in Lae and Nawaeb, and slower population dynamics in remote districts such as Kabwum and Menyamya.

RAM officers worked jointly with, District Health Teams, Community Team Leaders, and health facility staff to conduct detailed micro-planning. This included village mapping, team allocation, workload distribution, transport planning, and scheduling of survey and distribution activities. This process, coordinated under health team's guidance, ensured full inclusion of all villages listed in the master database and prevented omissions in remote or hard-to-reach settlements such as riverine and mountainous areas.

A structured community-wide social mobilisation campaign was conducted in all villages prior to implementation, coordinated through District Health Services -supported outreach mechanisms. This engagement informed communities of upcoming survey and distribution activities, strengthened trust in the programme, and familiarised field teams with local terrain, access routes, and community structures. Key malaria prevention messages were reinforced, particularly the correct and consistent use of LLINs.

A one-day training session was conducted at each health facility for all District Health Team members and Community Team Leaders, with participation from district health staff. This training finalised micro-planning arrangements and ensured all field teams were prepared for implementation. All training, micro-planning, and field coordination activities were jointly managed by RAM project officers in collaboration with local health centres.

Throughout implementation, RAM officers ensured that all activities were conducted within approved operational budgets and in accordance with LLIN Standard Operating Procedures (SOPs) and NMCP guidelines. Oversight and technical guidance from MPHA ensured both financial accountability and technical compliance across all districts of Morobe Province.

Survey Verification & Quality assurance

The household (HH) survey, verification, and LLIN distribution in Morobe Province was implemented using a structured, transparent, and community-centred methodology across all participating districts: Lae, Nawaeb, Huon Gulf, Finschhafen, Bulolo, Menyamya, and Kabwum. The approach ensured high data accuracy, strong community participation, and robust accountability under NMCP-aligned and MPHA-coordinated implementation frameworks.

1. Community Engagement and Field Preparation

Upon arrival in each village, field teams conducted organized community sensitisation sessions with ward councillors, village leaders, church representatives, and community members. The objectives of the LLIN programme and implementation procedures were clearly explained. This process, coordinated with local health teams, ensured community acceptance, participation, and transparency. Local leaders supported mobilisation and assisted in identifying village-based volunteers where required.

2. Use of Existing Population Records and Field Verification

Existing census and RAM survey datasets were used as baseline reference materials. However, all records underwent full door-to-door verification to ensure only physically present and eligible households were included. This was particularly important in urban Lae, peri-urban Nawaeb, and mobile populations in Bulolo and Huon Gulf.

Figure 8 HH survey in Omara Aid post & Summary of HH survey posted for community verification, Konge HC

3. Survey Implementation by Settlement Size

- Small settlements (<30 households): Full enumeration conducted by RAM and health teams.
- Large settlements (>30 households): Trained community volunteers supported by District Health Teams, with supervision from RAM officers and health facility staff.

4. Household Data Collection Standards

Standardised data were collected for each household, including:

- Household member details (age, sex, relationship)
- Residency status (minimum 9-month inclusion rule)
- Sleeping arrangements and household structure
- Communication access (phone/radio/network availability)

All data were recorded using standard LLIN survey forms to ensure consistency across Morobe Province.

5. Community Verification and Transparency

Completed household lists were publicly displayed in villages for at least 24 hours, allowing community verification, correction of errors, and confirmation of household inclusion. Final validation was conducted jointly by RAM and District Health Teams.

6. Quality Assurance and Random Verification

Approximately 6% of households per survey village were randomly verified by RAM and District Health supervisors to confirm:

- Household composition accuracy
- Residency eligibility
- Compliance with survey procedures

7. Multi-Volunteer Coordination

In larger settlements, multiple volunteers operated under coordinated supervision with harmonised data collection procedures. Final lists were jointly endorsed by community leaders, volunteers, and health teams.

8. Volunteer Training and Health Education

Volunteers received training and remuneration (PGK 20/day). They were also trained to deliver malaria prevention messages, including:

- Correct LLIN use
- Net maintenance and washing practices

- Behavioural change communication on malaria prevention

9. Master List Development and Validation

A province-wide master village list was finalised in coordination with district health teams and respective health centres. Survey results were compared with projected population estimates to identify migration trends, enumeration gaps, and settlement growth patterns.

10. Needs-Based LLIN Allocation

LLIN distribution was based on household composition and sleeping arrangements rather than fixed population ratios. Households typically received 1–4 nets depending on size and structure, ensuring equitable allocation.

11. Supply Chain Planning

Verified data was used to pre-allocate LLINs at district and LLG level, ensuring:

- Adequate stock per catchment
- Prevention of stock-outs
- Efficient transport planning
- Smooth facility-level distribution

12. Key Features of the Morobe LLIN System

The Morobe LLIN system is characterised by:

- Strong MPHA–RAM–District Health collaboration
- High community engagement through traditional and church structures
- Transparent verification and public listing processes
- Rigorous multi-stage quality assurance
- Needs-based, epidemiologically informed allocation
- Integration of malaria health education at community level

Figure 9 Trekkers carrying nets to remote villages, Derim HC

LLIN household Distribution Process

1. Social Mobilisation and Pre-Distribution Awareness

A organized social mobilisation phase was implemented prior to LLIN distribution across all implementing districts of Morobe Province, including Lae, Nawaeb, Huon Gulf, Finschhafen, Bulolo, Menyamya, and Kabwum. Communities were engaged in advance through District Health Services, church networks, ward leaders, volunteers and community representatives under the coordination of the local health officials.

Communities were informed of key implementation details, including:

- Distribution schedules and timelines
- Designated distribution sites (health facilities or village-based points)
- Requirement to present survey receipts or household records
- Verification and eligibility procedures

This early engagement significantly reduced operational delays, improved community participation, and ensured that households were well prepared for the distribution process across both urban settlements in Lae and remote rural communities in Kabwum and Menyamya.

2. Distribution Site Organisation and engagement of PNGDF & Police

LLIN distribution in Morobe Province was conducted at health facility, ward, or village level, depending on settlement size, geography, and accessibility. In densely populated and peri-urban settings such as Lae and Nawaeb, fixed distribution sites were established to manage high population density and large beneficiary flows in an orderly manner.

Given the operational complexity and higher crowd management requirements in Lae Urban LLG and surrounding settlements, RAM, in coordination with MPHA and District Health Services, requested support from the Lae Police to provide security assistance during distribution activities. In addition, where required, the Papua New Guinea Defence Force (PNGDF) was also engaged to support operations in selected high-risk urban settlements to ensure safety, crowd control, and smooth implementation of LLIN distribution activities.

In contrast, in rural and geographically dispersed districts such as Finschhafen, Huon Gulf, Bulolo, Menyamya, and Kabwum, distribution points were decentralised to village or cluster level. This approach was necessary due to difficult terrain, scattered population distribution, and limited transport connectivity, allowing LLINs to be delivered closer to communities and reducing the need for long-distance travel by beneficiaries.

Site selection and planning were carried out in close coordination with local health staff to ensure efficiency, accessibility, and effective crowd management. In remote mountainous and riverine areas, distribution arrangements were adapted to terrain conditions to ensure full coverage.

Figure 10 LLIN distribution in Wau Health center and ongoing distributions in Lae Urban

3. LLIN Coding and Accountability

All LLINs were opened at distribution sites and labelled with a province-specific identification code (e.g., MOR24) to ensure traceability throughout the distribution process.

This coding system supported:

- Commodity tracking and accountability
- Post-distribution monitoring and evaluation
- Prevention of diversion, misuse, or resale

The system was applied consistently across all districts under the supervision of RAM field teams.

4. Beneficiary Verification and Distribution Controls

A structured verification system was implemented to ensure accurate targeting and accountability. Beneficiaries were verified using household survey serial numbers, white receipts and cross-checked against approved household survey books during the enumeration phase.

Key controls included:

- Verification of names against household master lists
- Presentation and collection of signed white survey receipts prior to LLIN issuance
- Distribution strictly limited to verified household members

This ensured full alignment between household survey data and actual LLIN distribution outputs across Morobe Province.

5. Exception Handling Procedures

Special arrangements were applied in cases where standard documentation was unavailable or households were not present at the time of distribution:

- Households without receipts were verified against master household lists before issuance
- Absent household representatives had LLINs recorded and temporarily held under “nets held in trust” arrangements with village leaders or health facility staff
- In low-literacy settings, thumbprint confirmation was used as proof of receipt

These measures ensured inclusiveness while maintaining accountability and data integrity.

6. Remote Area Distribution Strategy

In hard-to-reach and logistically challenging areas—particularly in Kabwum, Menyamya, and parts of Finschhafen and Huon Gulf—a combined survey and distribution approach was applied.

This approach included:

- Pre-positioning of LLIN stocks at strategic health facilities or landing points
- On-arrival rapid household verification by RAM and health teams

- Immediate LLIN distribution following confirmation of eligibility

This adaptive strategy was essential in ensuring coverage of remote populations where transport constraints, weather conditions, and terrain limited repeated field access.

7. Logistics and Supply Chain Management

The LLIN supply chain for Morobe Province followed a structured national logistics pathway coordinated through MPHA and RAM:

Manufacturing hubs (India/China/Vietnam) → Port of Lae → MPHA central storage facilities → District health facilities → Health centres, aid posts, and community distribution points

The LLINs distributed were long-lasting insecticidal nets (Magnet LLINs), designed to provide sustained vector control effectiveness under Papua New Guinea's tropical and coastal environmental conditions, particularly in high transmission areas such as Lae, Huon Gulf, and Finschhafen.

8. Summary

The LLIN survey and distribution process in Morobe Province was implemented through a structured, transparent, and operationally adaptive system covering all seven participating districts: Lae, Nawaeb, Huon Gulf, Finschhafen, Bulolo, Menyama, and Kabwum. Strong coordination between RAM, MPHA, and District Health Services ensured adherence to national malaria control standards while allowing flexibility to address Morobe's diverse geographic and epidemiological conditions. The combination of rigorous household verification, decentralised distribution strategies, and strong community engagement enabled equitable LLIN coverage across urban, coastal, and remote inland populations, thereby strengthening malaria prevention efforts across the province.

RESULTS AND ANALYSIS – LLIN DISTRIBUTION, MOROBE PROVINCE (2024)

Table Three shows the estimated population to be covered by the program together with the actual population found along with the number of LLINs distributed by district. In total, 425,974 LLINs were distributed to a population of 868,227 people. This resulted in distribution of 49 nets for every 100 people in the province.

TABLE THREE
Nets Distributed At District Level In Morobe Province

District	Population In 2021	Population Surveyed 2024	House Holds Surveyed 2024	Nets Issued 2024	Nets Distributed Per 100 People
Bulolo	1,50,529	1,68,010	31,766	82,078	48
Finshafen	64,608	68,252	12,959	33,008	49
Huon	1,28,025	1,41,419	27,397	69,047	51
Kabwum	49,886	50,086	10,202	25,330	48
Lae	2,69,766	2,61,080	41,805	1,26,449	51
Menyama	1,01,248	1,03,474	20,956	52,319	50
Nawaeb	66,626	75,906	14,432	37,743	49
Totals	8,30,688	8,68,227	1,59,517	4,25,974	49.0

1. Provincial Overview of LLIN Coverage

The 2024 LLIN distribution in Morobe Province achieved a total coverage of 425,974 LLINs distributed to a population of 868,227 people, resulting in an overall distribution ratio of approximately 49 nets per 100 population. This level of coverage reflects a strong alignment with National Malaria Control Program (NMCP) household protection benchmarks and confirms that the programme successfully maintained near-universal coverage across all targeted districts.

Graph 1: Provincial Coverage Summary

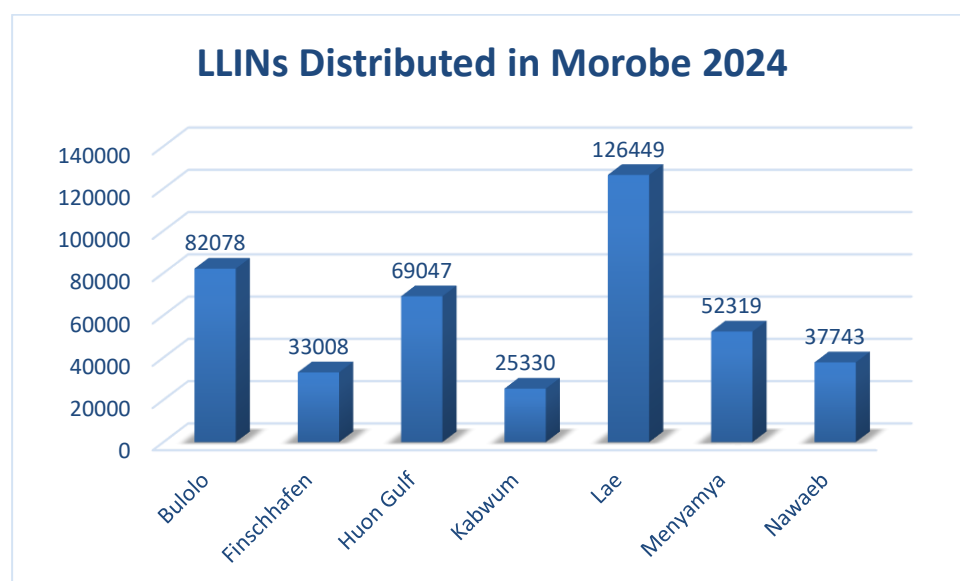

Population Covered:	868,227	
LLINs Distributed:	425,974	
Coverage Ratio:	49 / 100	

The distribution outcome confirms effective coordination between RAM, MPHA, District Health Services, and NMCP in ensuring equitable LLIN access across diverse ecological zones in Morobe Province.

2. District-Level Distribution Pattern

LLIN distribution was implemented across seven districts, reflecting both population size and malaria transmission risk stratification.

Graph 2: LLIN Distribution by District

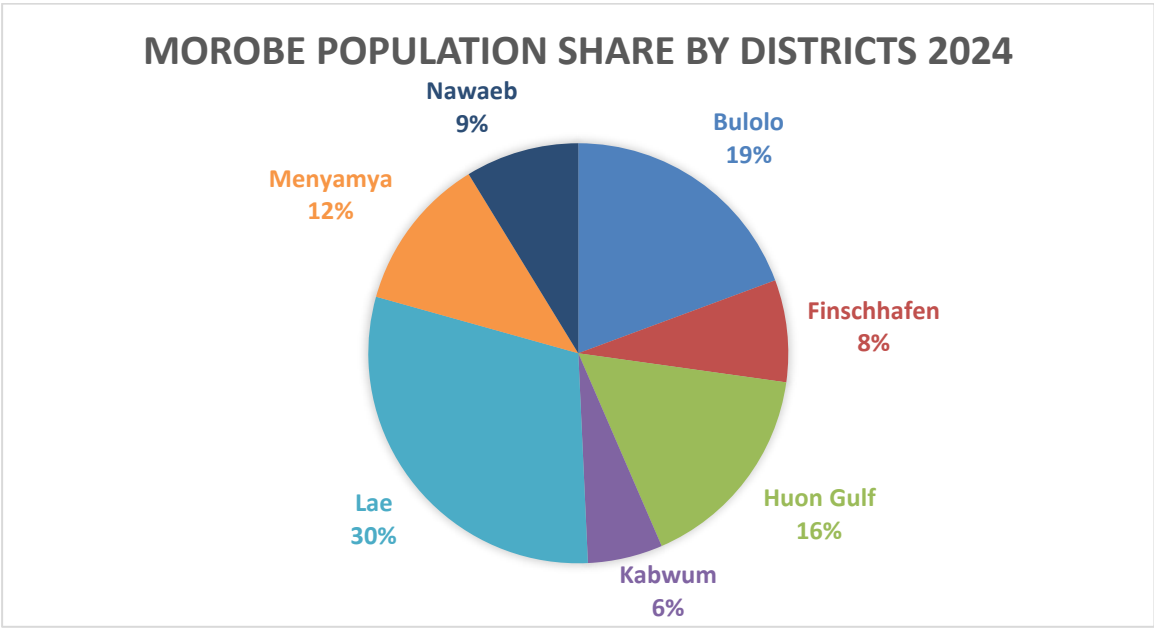

- Lae District received the highest allocation due to its dense urban population and sustained malaria transmission risk in informal settlements.
- Bulolo and Huon Gulf show high distribution volumes, reflecting peri-urban expansion and coastal transmission stability.
- Kabwum recorded the lowest distribution, consistent with low population density and out-migration trends.

3. Population Structure and Distribution Share

The provincial population is heavily concentrated in Lae and surrounding districts, shaping LLIN allocation priorities.

Graph 3: Population Distribution by District (Share %)

Lae alone accounts for nearly one-third of the provincial population, confirming its role as the primary urban malaria risk hub.

4. Urban–Rural Distribution Pattern

LLIN distribution demonstrates a strong concentration in urban and peri-urban settings, reflecting current malaria risk dynamics in Morobe Province.

Graph 5: Urban vs Rural Distribution Pattern

- 58% of LLINs were distributed in urban and peri-urban zones, particularly Lae and Nawaeb.
- This reflects a shift in malaria transmission risk from purely ecological factors to population density and settlement structure.
- Informal settlements in Lae remain a key focus area due to persistent vector breeding conditions.

7. Key Analytical Summary

The LLIN distribution results in Morobe Province demonstrate the following key outcomes:

- Sustained high coverage of 49 nets per 100 population
- Strong concentration of malaria risk and intervention in Lae urban corridor
- Continued peri-urban expansion driving population redistribution
- Stable or declining population growth in remote districts due to migration trends
- Significant improvement in data accuracy and verification processes

Overall, the 2024 LLIN distribution confirms that Morobe Province continues to require a mixed urban–peri-urban malaria control approach, with sustained emphasis on high-density settlements, while maintaining coverage in rural and coastal transmission zones.

Nets Donated and Post-Distribution Utilisation

District	LLG	HC	Donated
Bulolo	Mumeng Rural	Mumeng HC	89
	Waria Rural	Garaina AS	5
	Watut Rural	Watut HC	32
	Wau Rural	Wau HC	75
Finchafen	Hube Rural	Lengbati Airstrip	27
	Hube Rural	Wagizaring HC	22
	Yabim Mape Rural	Braun HC2	22
Huon	Morobe Rural	Morobe HC	7
	Morobe Rural	Jaka HC	47
	Wampar Rural	Wamper HC	40

	Deyamos Rural	Derim HC	95
	Seko Rural	Kabwum HC	6
	Seko Rural	Indagen HC	32
	Yus Rural	Sapmanga AP	16
	Yus Rural	Dinangat	15
	Yus Rural	Teptep HC	14
Menyamia	Aseki Rural	Aseki HC	27
Nawaeb	Nabak Rural	Kasanombe AP	40
	Wain/Erap Rural	Torowa HC	11
TOTAL			670

At the conclusion of the 2024 LLIN distribution programme in Morobe Province, a total of 670 LLINs remained as residual stock and were subsequently donated to selected health facilities across multiple districts. These distributions, detailed in Table Four, were undertaken in coordination with the Morobe Provincial Health Authority and district health teams to ensure appropriate utilisation within the public health system.

The majority of these nets were allocated to facilities in Bulolo, Finschhafen, Huon Gulf, Kabwum, Menyama, and Nawaeb, with higher concentrations observed in geographically remote districts such as Kabwum. In these settings, logistical constraints—including difficult terrain, limited transport access, and the impracticality of returning small quantities of nets to central storage—necessitated local redistribution.

Operationally, leftover nets typically arose under two conditions:

- Nets that had been removed from bales and could not be re-packed efficiently for return transport
- Small residual quantities at the end of distribution activities in remote or hard-to-access locations

Rather than incurring additional logistical costs, these nets were strategically donated to health facilities where they can continue to contribute to malaria prevention. In practice, these LLINs are expected to support inpatient wards, maternity units (particularly antenatal mothers), and emergency stock requirements, thereby strengthening facility-level infection prevention measures. This approach reflects a pragmatic and cost-effective use of resources, ensuring that no usable LLINs are wasted while reinforcing health service delivery at the local level.

Financial Performance and Budget Analysis

Morobe Province 2024				
Expense Types	Budget	Actual	Variance	% Variance
Training	K37,820.00	K46,339.00	-8,519.00	122.53
Human Resources	K8,37,363.09	K5,29,361.05	3,08,002.04	63.22
Fuel	K41,680.00	K1,07,852.09	-66,172.09	258.76
Vehicle Hire	K3,06,000.00	K4,28,809.90	-1,22,809.90	140.13
Boat Hire	K35,000.00	K16,850.00	18,150.00	48.14
Aircraft Hire	K1,08,346.15	K2,67,000.00	-1,58,653.85	246.43
Stationary	K3,000.00	K2,104.88	895.12	70.16
5% Contingency	K68,460.46	K43,911.60	24,548.86	64.14
Totals				
PGK	K14,37,669.70	K14,42,228.52	-K4,558.82	100.32
USD	\$3,67,976.40	\$3,69,143.24	-\$1,166.84	100.32

The financial summary for the 2024 LLIN programme in Morobe Province indicates that the total operational budget was PGK 1,437,669.70 (approximately USD 367,976), while actual expenditure reached PGK 1,442,228.52 (approximately USD 369,143). This represents a variance of PGK 4,558.82, equivalent to an overall budget deviation of +0.32%, indicating that programme expenditure remained closely aligned with planned financial allocations. Despite this relatively small overall variance, expenditure patterns varied significantly across budget categories. The programme budgeted for 30 hire vehicles; however, 35 vehicles were utilised due to operational delays, which also resulted in an increase in the number of operational days.

In addition, fuel costs increased beyond the budgeted rate. While the budgeted fuel price was approximately PGK 3.70 per litre, actual procurement costs rose to around PGK 4.10 per litre during implementation. This increase directly contributed to higher-than-anticipated expenditure on hire vehicles, boats, and other transportation-related costs.

The most notable cost overruns were observed in the following categories:

- **Fuel (258.76% of budget)**
Fuel costs more than doubled the allocated budget, reflecting the high logistical burden of operating across Morobe's diverse terrain. Extensive travel by road, sea, — particularly to remote districts such as Kabwum and Menyamya—significantly increased fuel consumption.
- **Aircraft Hire (246.43% of budget)**
Air transport costs were substantially higher than anticipated, highlighting the reliance on air access for isolated communities where road infrastructure is limited or non-existent.
- **Vehicle Hire (140.13% of budget)**
Increased demand for transport in both urban and rural areas, including extended operational timelines and difficult terrain, contributed to higher vehicle hire costs.
- **Training (122.53% of budget)**
Additional training expenditures likely reflect expanded engagement with community volunteers and health staff, reinforcing data quality, verification processes, and adherence to NMCP guidelines.

These cost increases were also influenced by security-related expenditures, including the engagement of police and PNGDF personnel in high-risk areas such as urban settlements in Lae, which added an unplanned but necessary financial burden.

Conversely, several budget categories recorded significant underspending:

- Human Resources (63.22% of budget)
Lower-than-expected personnel costs suggest efficiencies in staffing, potentially due to effective utilisation of existing health staff and community volunteers.
- Boat Hire (48.14% of budget)
Reduced reliance on water transport or efficient route planning may have contributed to cost savings in coastal areas.
- Stationery (70.16% of budget) and Contingency (64.14% of budget)
These savings indicate controlled administrative expenditure and limited reliance on contingency funds.

Cost Efficiency

Based on total nets distributed (425,974 LLINs), the average delivery cost was approximately PGK 3.82 per net. This represents a modest increase of approximately 3% above the planned unit cost, primarily driven by higher transport and security-related expenses. Given the operational complexity of Morobe Province—including its challenging geography, dispersed population, and security considerations—this cost per net remains within an acceptable and efficient range for large-scale public health interventions in Papua New Guinea.

Summary

Overall, the financial and operational performance of the LLIN programme in Morobe Province demonstrates a high level of efficiency and adaptability. While certain cost categories exceeded initial projections due to unavoidable logistical and security constraints, these were offset by savings in other areas, resulting in a near-balanced budget outcome. The strategic redistribution of leftover LLINs to health facilities further underscores the programme's commitment to maximising resource utilisation and sustaining malaria prevention efforts beyond household distribution.

Together, these outcomes highlight a well-managed programme that successfully balanced cost control, operational reach, and public health impact in one of Papua New Guinea's most complex malaria transmission settings.

TABLE SEVEN**Cell and Radio Coverage In Morobe Province**

District	Villages	House Holds Surveyed	Digicel	Bmobile	City Phone	Houses with Radios	Villages With Radio Networks
Bulolo	428	31,766	370	116	0	3,188	312
Finshafen	228	12,959	214	1	0	1,667	73
Huon	237	27,397	217	135	0	7,948	234
Kabwum	173	10,202	268	0	0	172	104
Lae	389	41,805	305	310	0	19,647	275
Menyama	295	20,956	263	0	0	2,003	141
Nawaeb	186	14,432	140	12	0	3,130	111
Total	1,936	1,59,517	1,777	574	0	37,755	1,250

Across Morobe Province, communication access plays a direct operational role in LLIN distribution and malaria prevention activities. Table Seven shows that out of 1,936 villages, Digicel coverage is present in 1,777 villages (91.8%), while Bmobile reaches 574 villages (29.6%), and City Phone has no coverage (0%). Radio access is recorded in 37,755 households, and 1,250 villages (64.5%) report some level of radio network availability.

In well-connected urban and peri-urban settings such as Lae, communication coverage is strongest, with both Digicel and Bmobile operating across a large proportion of villages and 19,647 households reporting radio access. This enables efficient LLIN mobilisation, rapid coordination with health teams, and timely dissemination of malaria prevention messages through mobile and radio channels.

In contrast, remote districts such as Kabwum and Menyamya show more limited communication access. Kabwum records Digicel presence in 268 villages but only 172 households with radios, while Menyamya has Digicel coverage across 263 villages with just 2,003 households owning radios. These figures highlight heavy dependence on a single mobile provider and limited alternative communication channels.

Intermediate districts such as Bulolo (370 Digicel villages, 3,188 radio households) and Nawaeb (140 Digicel villages, 3,130 radio households) show moderate communication capacity, while Huon Gulf combines relatively balanced mobile coverage with stronger radio access (7,948 households), supporting more effective programme communication.

This communication profile directly influences LLIN implementation. In high-connectivity areas, digital systems allow faster coordination, real-time reporting, and efficient distribution planning. In lower-connectivity districts, LLIN delivery and malaria messaging rely more on direct engagement through health workers, ward leaders, and community structures.

Overall, the data shows that while 91.8% village-level mobile coverage supports broad communication reach across Morobe Province, gaps in Bmobile presence and uneven radio access mean that LLIN and malaria programmes must continue using a blended communication strategy combining mobile, radio, and face-to-face engagement to ensure equitable coverage and effective behaviour change across all districts.

Conclusion – LLIN Implementation in Morobe Province

Overall, the 2024 Long Lasting Insecticide Nets (LLIN) survey, verification, and distribution exercise in Morobe Province was successfully implemented across Bulolo, Finschhafen, Huon Gulf, Kabwum, Lae, Menyamya, and Nawaeb Districts. The programme achieved broad geographic coverage across highly diverse ecological and operational settings, ranging from densely populated urban settlements in Lae and Nawaeb to remote coastal communities in Finschhafen and Huon Gulf, and difficult mountainous terrain in Kabwum and Menyamya. Implementation was made possible through strong coordination between the National Department of Health (NDOH), the National Malaria Control Program (NMCP), the Morobe Provincial Health Authority (MPHA), District Health Teams, and Rotarians Against Malaria (RAM), with continued support from health facilities and local community structures. Strong leadership and operational oversight from MPHA played a critical role throughout implementation. MPHA provided guidance during planning, facilitated district-level coordination, and supported field teams in managing logistics through road, air, and sea transport systems. Their involvement was particularly important in navigating Morobe Province's challenging geography and ensuring access to remote inland, coastal, and urban communities.

The programme successfully reached all targeted districts, with a total of 425,974 LLINs distributed to a surveyed population of 868,227 people, achieving an overall coverage of 49 nets per 100 population. This reflects strong operational performance despite significant logistical complexity and the highly varied malaria transmission environment across Morobe Province, from urban settlements in Lae to remote inland and coastal communities in Huon Gulf, Finschhafen, Kabwum, and Menyamya.

Two remaining districts, Markham and Tewae-Siassi, were not included in the 2024 implementation cycle due to scheduling and operational sequencing under the provincial distribution plan. These districts are scheduled for coverage in the 2026 LLIN distribution cycle, during which an estimated 92,000 LLINs are expected to be distributed, completing province-wide coverage in line with National Malaria Control Program (NMCP) objectives. Despite this overall success, implementation was carried out under difficult operational and environmental conditions that affected the pace and coordination of activities across several districts.

In Bulolo District, persistent heavy rainfall significantly affected verification and distribution activities, particularly in inland villages of Ward 9, Watut Rural LLG, where deteriorating road conditions restricted access. Delays in the return of survey books by volunteers also affected verification and distribution schedules, while limited mobile network coverage disrupted communication between field teams. At Garasa Health Centre, operations were delayed for approximately three weeks due to late delivery of nets from Wau by North Coast Aviation.

In Finschhafen District, continuous rainfall remained a major constraint throughout implementation, rapidly deteriorating road conditions and prolonging operations in areas such as Ogeranang and Mindik. Vehicle breakdowns and mechanical issues further delayed field activities. In several locations, operations were undertaken without dedicated vehicles due to budget limitations, resulting in extensive trekking by RAM officers and volunteers. In Mindik, approximately 95 percent of activities were conducted on foot. Difficult terrain, persistent rainfall, poor network coverage, and delayed return of survey books further complicated verification processes. Ethnic tensions, community dissatisfaction regarding net allocation, and schedule disruptions due to funerals and village activities also affected implementation.

In Kabwum District, operational challenges were particularly severe due to remoteness, weather, and transport limitations. At Yalumet Health Centre, continuous rainfall and delayed delivery of nets by North Coast Aviation significantly disrupted schedules. Low literacy levels among volunteers required extended training periods, while missing training materials further complicated orientation. Poor mobile network coverage affected communication, and cultural obligations and community events influenced movement and scheduling across villages. Further challenges were experienced in Indangen, Konga, and Satwag catchments, where delayed net deliveries, earthquakes, and closure of the Konga airstrip disrupted operations. RAM teams undertook long treks for microplanning, training, and movement of supplies. In Sapmanga, reliance on a single charter aircraft provider delayed implementation, while volunteer engagement was affected by higher rates offered by other organisations. Communication barriers were also common due to limited network access.

In Lae District, urban implementation presented different challenges. In Lae Urban, poor crowd control during awareness and distribution activities resulted in disturbances, theft of nets, and difficulties maintaining order. Community conflicts affected stock reconciliation and limited mop-up activities. At Milford Haven and Malahang catchments, tribal conflicts discouraged community participation, while the short implementation timeframe placed additional pressure on limited staff and resources.

In Nawaeb District, operations in Situm and Boac were delayed due to floods, landslides, and rough sea conditions caused by persistent bad weather. In Baidoang and Kasanombe, severe weather completely cut off road access, preventing implementation in some catchments.

It was also unfortunate that seven containers stored at the Bulolo Health Facility yard were stolen before they could be formally donated over to the Provincial Health Authority (PHA). However, RAM sincerely acknowledges the support of the Morobe Provincial Health

Authority in agreeing to reimburse the cost of the missing containers. RAM is pleased to report that the value of the missing Global Fund assets will be repaid by the Provincial Health Authority.

Despite these challenges, strong community participation, effective coordination between stakeholders, and adaptive field management enabled the programme to achieve its key objectives across most targeted areas. The verification system, including household listing, public display of survey data, and structured cross-checking by RAM and District Health Teams, strengthened transparency and data integrity. Weekly coordination between RAM and MPHA further supported real-time monitoring, issue resolution, and accountability across all districts.

In conclusion, the 2024 LLIN programme in Morobe Province represents a strong example of coordinated, risk-based malaria intervention delivery across a complex and diverse provincial setting. The success of the programme was underpinned by effective collaboration between MPHA, District Health Services, NMCP, RAM, health facilities, volunteers, and local communities. Continued strengthening of logistics systems, urban implementation strategies, and support for hard-to-reach rural areas will remain essential in sustaining and improving malaria control outcomes across Morobe Province.

Acknowledgements

On behalf of the Rotarians Against Malaria (RAM) household distribution team that implemented the Long Lasting Insecticide Nets (LLINs) Distribution Programme across the districts of Lae, Bulolo, Finschhafen, Huon, Kabwum, Menyamya, and Nawaeb, we sincerely extend our appreciation to the National Department of Health (NDOH), the National Malaria Control Program (NMCP), the Morobe Provincial Health Authority (MPHA), and all District Health Staff across the seven districts for their outstanding support, cooperation, and commitment throughout the implementation of the programme.

At the national technical level, RAM acknowledges with gratitude the guidance and support of Dr. Jacob Kisomb (NMCP), whose leadership and oversight contributed significantly to the successful execution of the programme.

At the provincial level, RAM would like to formally acknowledge the invaluable leadership, coordination, and continuous support provided by Dr. Kipas Binga (Chief Executive Officer), Dr. Kelly Mesere (Director Public Health), Mr. Edwin Benny (Provincial Disease Control Officer), Ms. Lucy Dally (Provincial Malaria Supervisor), and Ms. Rose Aisuk (Assistant Provincial Malaria Supervisor). Their consistent engagement and operational support were instrumental in ensuring effective planning, coordination, and delivery of LLIN activities across Morobe Province.

The programme would not have been successfully implemented without the dedication and tireless efforts of the district health teams. RAM sincerely acknowledges all District Health Officers, health workers, volunteers, and support staff who contributed throughout the planning, coordination, verification, and distribution phases. In particular, we recognise the following individuals for their valuable local knowledge, commitment, and support provided across the seven districts:

Lae District

RAM also acknowledges and sincerely appreciates the support of logistical and transport service providers who played a critical role in ensuring smooth implementation of the programme. Special recognition is extended to Kera Transportation for the efficient movement of containers to various storage locations.

Further appreciation is extended to Airport Hires, Country Tours, Fly Hire, and Pishon Hire for providing reliable transport services throughout the operation. RAM also acknowledges the valuable contribution of local dinghy and boat operators, as well as local vehicle hire services, which were essential in reaching remote and hard-to-access communities. Special thanks are also extended to North Coast Aviation for providing air transport support in remote areas of Kabwum, Finschhafen, and Bulolo, enabling access to otherwise difficult fly-in locations.

RAM further acknowledges Niugini Oil Company and Puma Energy for the supply of bulk fuel, and RH Tyre & Auto Service Limited for essential vehicle servicing and support in Lae District, all of which contributed significantly to uninterrupted field operations.

Appreciation is also extended to all church-run health facilities under Lutheran Health Services, as well as all government-run health facilities, for allowing their staff to actively participate in the programme and support field implementation.

Finally, RAM extends heartfelt appreciation to all RAM's Project Officers, Team Leaders, survey volunteers, community leaders, and local communities across Morobe Province. Their commitment in assisting with household surveys, distribution activities, and ensuring that LLINs reached intended households was fundamental to the success of the programme. Their local knowledge, cooperation, and resilience in challenging conditions are sincerely acknowledged and highly valued.

ANNEXURE 1

MOROBE PROVINCE LLINs DISTRIBUTION IN PICTURES 2024

Meeting the Provincial Heads

Meeting with PHA: Ogeranang HC, Indagen, Konge & Satwag HCs,

Microplanning

Microplanning at: Ogeranang HC, Kapo HC, Dinangat HC, Omora HC, Situm & Boac HC, Indagen, Konge & Satwag HCs, Garasa HC, Garaina HC,

Training & Survey

Survey Volunteer Training & Survey: Ogeranang HC, Kapo HC, Indagen, Konge & Satwag HCs, Aseki HC, Unitech, Igam & Bob Sinclair HCs, Derim HC, Menyamya HC, Wagizaring HC,

Verification

Verification: Omora HC, Situm & Boac HCs, Braun HC, Lae Urban, Indagen, Konge & Satwag HCs, Derim HC,

Distribution

Distribution of LLINS: Dinangat HC, Aseki HC, Malahang & Milford Have HCs, Situm & Boac HCs, Lae Urban, Morobe HC, Derim HC, Wagizaring HC,

Transportation & Storage

Transportation & Storage of LLINS: Ogeranang HC, Kapo HC, Omora HC, Situm & Boac HCs, Lae Urban, Aseki HC, Makini HC, Wagizaring HC,

Happy Faces

Happy Recipients of LLINS: Aseki HC, Makini HC, Derim HC, Wagizaring HC,

Donation

Donation of LLINS: Aseki HC, Derim HC,
